

## Activity 1a

To get started, we suggest you understand a little about the interactive web surrounding your learning. Everyone has an interactive web and each one is unique to that person's learning.

Watch this video <https://bit.ly/InteractiveWebInfinity> explains the interactive web.

## Activity 1b

Now it is time to do a warm-up activity about your learning before you draw your first learning map. Look at the Learning Frame below, which shows 14 different ways of learning – from “visual learning” on the left to “learning in networks” on the right.

Talk to a classmate about the different types of learning. Ask your teacher to explain the types of learning that you do not understand. This is not a complete list you may wish to add some other types of learning and talk to someone about your thinking.

1. List the five ways of learning that you **have used** most in your life.

- 
- 
- 
- 
-

Explain to a classmate why you have used those ways of learning most of the time.

2. List three ways of learning that you **want to** use more in the future.

Explain to a classmate why you want to use those ways of learning.

3. List ways of learning that you think you **have to** use in the future to get ahead, whether or not you like those ways of learning.

Explain to a classmate why you think you have to learn in those ways.

*Students need to learn-how-to-learn. Teachers, aides and leaders also need to keep learning to have successful lives in the modern world! Learning is now a part of everyday life.*
